PROGRAM PLANNER
WELCOME ADDRESS

Dear Colleagues and Friends,

It is with great pleasure that I welcome you to the 13th International Congress of the European Society for Child and Adolescent Psychiatry. The wonderful city of Florence will host us during our five days of discussions about the most important present and emerging topics in Child and Adolescent Psychiatry.

This ESCAP Congress has been created by the work of each participant, clinician or researcher, working in the field of the welfare and mental health of children and adolescents. Each of our colleagues has a genuine interest in developing a contemporary and appropriate culture for children, focused on the individual rights and environmental needs of each child. The advancements in neuroscience, as well as the growing imperative for evidence-based medicine have created dramatic, new challenges for Child and Adolescent Psychiatry.

The Congress program is especially sensitive to the fact that the developmental periods of childhood and adolescence represent a crucial time for timely diagnostic evaluations and the implementation of effective treatments. Our growing knowledge of the magnitude of the problems facing children, as well as our growing recognition of the early age of onset of most mental disorders, is raising, for all health workers, an awareness of the urgent need for timely interventions with the genuine hope that these interventions will also change long-term outcomes. At the same, it is also hoped that the new knowledge and our collective experience will offer extraordinary opportunities for prevention.

The themes for the Congress include, among others, developmental neuroscience, assessment instruments, treatments and treatment effectiveness. Many other important issues will be addressed at a highly scientific, yet clinically relevant level so that there are many opportunities for discourse and learning for all attendees.
We are pleased that you are joining us in Florence to address the contemporary challenges to Child and Adolescent Psychiatry.

During our time together, we hope to “bridge” widely disparate knowledge and disciplines by sharing models and developing integrated perspectives. Perhaps, the most demanding challenge will be to bridge the gaps between mind and body and between differing approaches and professions, to arrive at a common pathway for research and clinical practise. By the end of the Congress, we hope we will have enhanced our collective understanding of the causes and consequences of child and adolescent psychiatric illness, as well as how to evaluate, treat and prevent these illnesses effectively.

The content and your participation in the 13th International Congress of ESCAP offers great promise. We look forward to joining with you as we approach a new scientific and cultural approach for European Child and Adolescent Psychiatry.

FORMAT DESCRIPTIONS OF THE SCIENTIFIC PROGRAM

The Scientific Program will consist of the following:

Main Lectures

Main Lectures will have a strong scientific focus. They will be mainly theoretical and research-oriented. These lectures will be delivered by leading psychiatrists, basic scientists or other mental health professionals invited by the Scientific Committee. They will cover major topics of the Congress theme. The Main Lectures will last forty-five minutes, with at least fifteen minutes set aside for discussion at the end of the lecture.

State of the Art Lectures

These lectures will present the recent developments in a certain area with special focus on the Congress theme.

Symposia

Symposium sessions will focus on clinical issues and will constitute the central element of the Congress. These high-quality symposia will bring together people from different backgrounds and will encourage an active and enriching interaction between speakers and participants. A symposium is data-driven and presents perspectives of different aspects of a topic or different views of the same topic. The symposia will last 120 minutes with a maximum of four talks and a discussion; each symposium will reserve at least thirty minutes at the end of the presentation for a discussion.
Training Courses

These programs last eight hours and provide a review of a topic area rather than new research information. They also focus on “how to do it” with respect to academic areas, clinical problems or a blending of the two. Participants must purchase an extra ticket to attend such courses. These formats are didactic and provide interaction and/or discussion between presenters and participants.

Half-Day Courses

These programs last three hours and provide a review of a topic area rather than new research information. They also focus on “how to do it” with respect to academic areas, clinical problems or a blending of the two. Participants must purchase an extra ticket to attend such courses. These formats are didactic and provide for interaction and discussion between presenters and participants.

Debates

These 120 minute events will include brief presentations lasting a total of more than sixty minutes, followed by a minimum of sixty minutes of broad interactive discussions. Topics will include important and controversial issues such as the specific roles of various professionals in mental health care and the role and prospects of special treatment.

Clinical Consultation Breakfasts

Clinical Consultation Breakfasts last for one-and-a-half hours and provide a forum for experts to share clinical knowledge and discuss difficult cases with attendees.
Clinical Consultation Breakfasts are scheduled at 8 - 9.30 every morning. Participants must purchase an extra ticket to attend Clinical Consultation Breakfasts and a continental buffet breakfast is included in the registration fee.

**Workshops**

The length of these sessions is 120 minutes. Workshops should deal with topics of special interest to child and adolescent mental health, using multiple brief presentation of no more than sixty minutes, followed by approximately sixty minutes of discussion.

**Clinical Case Conferences**

During these 120 minute sessions, the presenter describes a clinical case and discusses with the audience possible diagnoses and treatments. This format gives clinicians the opportunity to present difficult cases or new treatments.

**Meet the Expert**

In these sessions, a leading child and adolescent psychiatrist will interact freely with a group of generally younger and less experienced members of the same field. The session will focus on the expert’s career, research interests and experience, as well as a on perspectives on future research. Facilitators of each session will be other experts in the field.

**Poster Presentation Sessions**

Posters are hypothesis driven and authors will present their new research findings or important ongoing research. The three best posters will be awarded Poster Prizes at the end of the Congress.

DONALD COHEN FELLOWSHIP PROGRAM

The Donald J. Cohen Fellowship is a training program for young scholars modelled on successful activities at ESCAP European Research Seminars and IACAPAP and AACAP Congresses and sponsored by Foundation Child.

The program includes:

1. Daily small group meetings with leading experts
2. A poster presentation attended by senior faculty members
3. Seminars presented by Fellows
4. Participation in day-long seminars on research methodology, autism or pediatric psychopharmacology
5. Social activities

Fellowship activities will not be scheduled at the same time as other highlights of the Congress. Fellows will also benefit from free registration and free accommodation at university residences.

ERICE

ERICE (Empowerment and Resilience in Children Everywhere) is an international collaborative project aimed at improving the lives of Israeli and Palestinian children. It includes Israeli, Palestinian, European and American child mental health professionals, and is supported by Foundation Child and Yale University.

ERICE is led by Shafiq Masalha, PhD, Ruth Feldman, PhD, and Eyad Hallaq, PhD. The organization is affiliated with a number of leading Israeli, Palestinian, Italian and American Universities.

Founded in 2004, ERICE has many important goals including the support of research on the prevalence and nature of childhood disorders in this region of conflict, the implementation of treatment programs and the establishment
of training and degree programs. It is guided by the belief that children everywhere are to be cherished and that protection of children - as well as kindness - is a shared human value.

Since its first meeting in Jerusalem in 2004, this group continues to meet both in the region and in Europe. The last two Italian meetings were in Sicily (2005) and in Rome (2006), where the ongoing results from the first funded joint project were presented.

The third Italian meeting of the group will be held in Florence from 23rd to 25th of August and will take place at the Innocenti Institute. A symposium has been organized on the occasion of the ESCAP Congress and will review the history, psychological process and initial accomplishments of ERICE as well as it long-term goals.

**ROME GROUP**

Between the 16th and 19th of July, 2003, a group of world professional leaders in the area of child trauma from North America, Australia, Europe and Asia, gathered in Rome to present their clinical findings and research advances as well as to seek out a way to integrate these with the current state of knowledge in this area.

Leading international experts such as Robert Pynoos, Alexander McFarlane, Barry Nurcombe, James Leckman, Steven Berkowitz, Nathaniel Laor, Claude Chemtob, Hans Steiner, John Fayyad and Ernesto Caffo took part in this meeting, entitled “Caring for Children in Times of Maltreatment, War, Terrorism and Disasters”.

The meeting of this established “Rome Group” was organized under the auspices of Foundation Child (Italy) and the International Association for Child and Adolescent Psychiatry and Allied Professions (IACAPAP). As a result of their deliberations, the experts signed the Declaration of Rome, asking Governments worldwide for an increased investment in prevention, treatment and research in the area of caring for children affected by trauma.
The mission of the Rome Group is to promote a major understanding of the severe consequences of childhood exposure to trauma, as well as to develop effective interventions that focus on the needs of the individual, the family, and the community and to raise standards of care throughout the world. As a result, leaders in the field of child trauma are being sought out constantly and are joining this important group.

The Rome Group met a second time on the occasion of the 16th Congress of the International Association for Child and Adolescent Psychiatry and Allied Professions, which took place in Berlin in 2004. During the 13th International Congress of the European Society for Child and Adolescent Psychiatry they will present advances in trauma research with children and new intervention models both in the form of symposia and as a training course.

**CHILD HELPLINE INTERNATIONAL**

Child Helpline International (CHI) is a global network of telephone helplines and outreach services for children and young people. Working in over 150 countries, CHI was founded on the belief that children and young people have rights, and that they alone are the best individuals to identify their problems. As an organization devoted to securing children’s rights, CHI is committed to maintaining the spirit of the Convention on the Rights of the Child (CRC). Its main concern is to respond to children in need of care and protection and voice their concerns to policy and decision-makers by establishing a global network of children’s helplines and providing support to individual helplines for children. During the ESCAP congress CHI will take part in the symposium “Helplines and Internet: innovative intervention in child and adolescent mental health.” This symposium is aimed at analyzing the role of helplines in the European countries and promoting the exchange of data and experiences, particularly regarding the issue of quality standards and professional skills.
